This award is designed to recognize individuals who have demonstrated life-long, outstanding contributions to the field of conservation. They are recognized for their innovation, leadership and dedication to the conservation field. Either through their personal activities and/or leadership, they have gone beyond the call of duty or responsibility to an employer, client or their community. These individuals have helped to celebrate and inspire innovation in the conservation field and have made a difference in their area of expertise. Nominees have encouraged and motivated others to take similar leadership roles towards conservation work.

Nominations are reviewed and evaluated by a special sub-committee of the Latornell Steering Committee.

If you are interested in nominating an individual for consideration to the 2008 Conservation Pioneer Award, see the criteria detailed on the A.D. Latornell Conservation Symposium website at www.latornell.ca
Frank Shaw

The late Bruce Duncan came to be known early in his career, probably first by the Hamilton Naturalists’ Club while working as a nature interpreter at the Tanyhaw Nature Centre where he initiated a hacking program for Bald Eagles. The successful program helped to bring back the Bald Eagle to the north shores of Lake Erie. He worked 11 years for the Grand River Conservation Authority prior to joining the Hamilton Naturalists’ Club while working as a nature interpreter at the Tanyhaw Nature Centre where he initiated a hacking program for Bald Eagles.

In addition to his activities with the Hamilton Naturalists’ Club and the Conservation Authorities, Bruce was also a past president of the Ontario Bird Banding Association. In 1992 he received the honour of being the Environmentalist of the Year in Hamilton, by then he also had received the Canadian 25 for the Environment Service to the Community. In 1997, Bruce was awarded an accolade from the Hawk Migration Association of North America.

Bruce was a storyteller and a beautiful writer. He was a passionate nature lover and outdoorsman who loved to teach school children in and around Hamilton about the plant and animal life in their surroundings. He was a prolific contributor to books and scholarly articles on eagles, hawks and natural history in Ontario. In his 60 years, Bruce taught many and accomplished a great deal. Hamilton and its area continue to benefit from having had Bruce Duncan in their community.

Deborah Beatty

Deborah Beatty is currently the volunteer President of the Lake Simcoe Conservation Foundation and the Helen McCrea Peacock Foundation, two important organizations that provide funding for environmental projects. She has been a committed environmental volunteer for most of her life, working with nature or working to save nature, and now devotes her full working life to this issue. Deborah brings an incredible passion and devotion to her roles in these organizations, and she also evangelizes these beliefs to those who do not share them.

In addition to her work in the aforementioned foundations, Deborah has also been a board member of the Rescue Lake Simcoe Coalition and the Ladies of the Lake. She has been an active member of the Garden Club of Toronto since 1981 and a key organizer of the Canada Blooms Festival. In addition, she has been a dedicated Toronto Community Foundation Board Member since 2000 and was awarded the Belchen/Gorby Award in 2005.

Most importantly, Deborah spent most of her life finding ways to become ‘greener’. Some of these initiatives have included using only biodegradable products in her home and urging all her neighbours to do the same. She also began composting well before the green bin was introduced, and managed to produce in her yard. Deborah is not afraid of personal sacrifice to make a difference and is very conscious and passionate about the environment and expresses this concern to others.

Her actions have and continue to inspire many individuals in our communities. Deborah’s spirit and outstanding contributions are truly remarkable.

Louise Wise

Louise Wise has been capturing the landscape of southern Ontario from the airplane and camera for over 30 years. She has taken thousands of images of Ontario’s landscapes, including most of the Oak Ridges Moraine and the waters that flow from it. She has generously shared her talent and images with many organizations, including several conservation authorities. Her work has been instrumental in compelling donors to give, and politicians to rethink development plans all for the cost of gas and film!

Lou had been taking aerial photographs from rented aircraft as a hobby since the 1970’s but it wasn’t until 1980 that his efforts were directed toward the conservation of the environment. While still working full time as Director of Educational Media for the Toronto Board of Education, Lou often took aerial photos of landmarks that interested him. Upon retiring in 1984, Lou continued to capture the landscape as a hobby. With Piper Cherokee and his enthusiasm for the environment as is great as ever. In 1988 he acquired the funds to undertake a three year project to photograph 150 Class 1 wetlands across Southern Ontario from Windsor to Cornwall and up into the Muskokas.

Much of his work continued in the early 1990’s when he wrote a book of photos titled The Oak Ridges Moraine. After consulting with conservationists and educators about what material might be useful, Lou continues sharing photos of diverse subjects within the Moraine such as kettle lakes, headwaters of rivers, gravel pits, car wrecking yards, urban settlements and more. He makes these photos available for schools and conservationists who use them widely. Today he also focuses his interest on the tributaries of the Central Lake Ontario Conservation Authority, the Duffins Creek Watershed, the Nottawasaga Valley Watershed and the Niagara Escarpment.

Louise Wise boasts an extended list of accomplishments with a clear emphasis on education and guidance, promoting conservation principles through aerial photography and a truly personal inspiration for the environment.

Michael Hough

Michael Hough’s distinguished career has progressed through many professional avenues including private consulting, practitioner, academic teacher, respected author and community activist. He was the founding partner of Hough, Stanbury & Associates in 1963 and has continued with the firm as it has evolved today into Envision – The Hough Group. He was also a founder of the School of Landscape Architecture at the University of Toronto and more recently has taught as Professor in the Faculty of Environmental Studies at York University, as well as Harvard. Michael has travelled extensively for many years lecturing and providing leadership through academic endeavors and practice. He has lead several generations of landscape architects in Canada and abroad in articulating an ecological view of planning and design that encompasses a consideration of nature and society as a functioning whole. His books are widely distributed in the world and include Cities and Natural Processes, Out of Place: Restoring Identity to the Regional Landscape and People and City Landscapes.

Trained as an architect and landscape architect, Michael has bridged several professional disciplines to bring a new view to urban design and site planning. He has been an aerial photographer for 40 years within his consulting practice, students within various academic programs where he has taught, and through community efforts and volunteer leadership. Over the years, he lead a movement of design thinking that has evolved into a foundation for today’s urban agenda for healthier built communities and natural systems. In addition to his writings, and award winning research, Michael has left a legacy of landmark design projects which form anchors in the urban environment at Scarletmore College, Ontario Place, Major Hill’s Park – Ceremonial Route (Ottawa), and many others here and abroad.

Ted Mosquin

Ted Mosquin has had a distinguished career as a university professor, researcher and policy advisor deeply committed to involving governments and the public in a greater understanding of our ecologically intertwined world. He was deeply involved in many biodiversity studies and policy development in addition to being a member and major contributor on the Canadian delegation negotiating the Rio 1992 Convention on Biological Diversity. Ted also worked on drafting the 1995 Canadian Biodiversity Strategy, and was the principal author of the Museum of the Nature’s Country Study of Biodiversity.

Not just a researcher and author, he was the first President and Executive Director of the Canadian Nature Federation, President of CPAWS, and director of many similar boards concerned with conservation and the environment. To all these organizations he brought a deep knowledge that enhanced their integrity and a quiet passion that gave them life. It is no wonder that the Government of Canada (department of the environment) put his name forward for the Premier Jubilee Medal for his conservation work.

While Ted was busy contributing to international, national and regional levels, he was also focused on local issues. In a certain capacity, he was a member of the Mississippi Valley Conservation Foundation and was the spark and driving force for the creation of the Mississippi Madawaska Land Trust Conservation Fund in 2003, of which he is the President.

Ted is a genuine and sincere conservationist with modesty who leads by the way. His love of nature and his passion for the Purdon Conservation Area led to the creation of a nature trail into the highland forest area surrounding the fen. In 2005, Ted oversaw the construction of the trail that now bears his name. His accomplishments are diverse and many will remain a focal point for years to come.
Conservation Pioneer Awards

This award is designed to recognize individuals who have demonstrated life-long, outstanding contributions to the field of conservation. They are recognized for their innovation, leadership and dedication to the conservation field. Either through their personal activities and/or leadership, they have gone beyond the call of duty or responsibility to an employer, client or their community.

These individuals have helped to celebrate and inspire innovation in the conservation field and have made a difference in their area of expertise. Nominees have encouraged and motivated others to take similar leadership roles towards conservation work.

Nominations are reviewed and evaluated by a special sub-committee of the Latornell Steering Committee.
